

Blind spot safety Intelligent AI recognition box

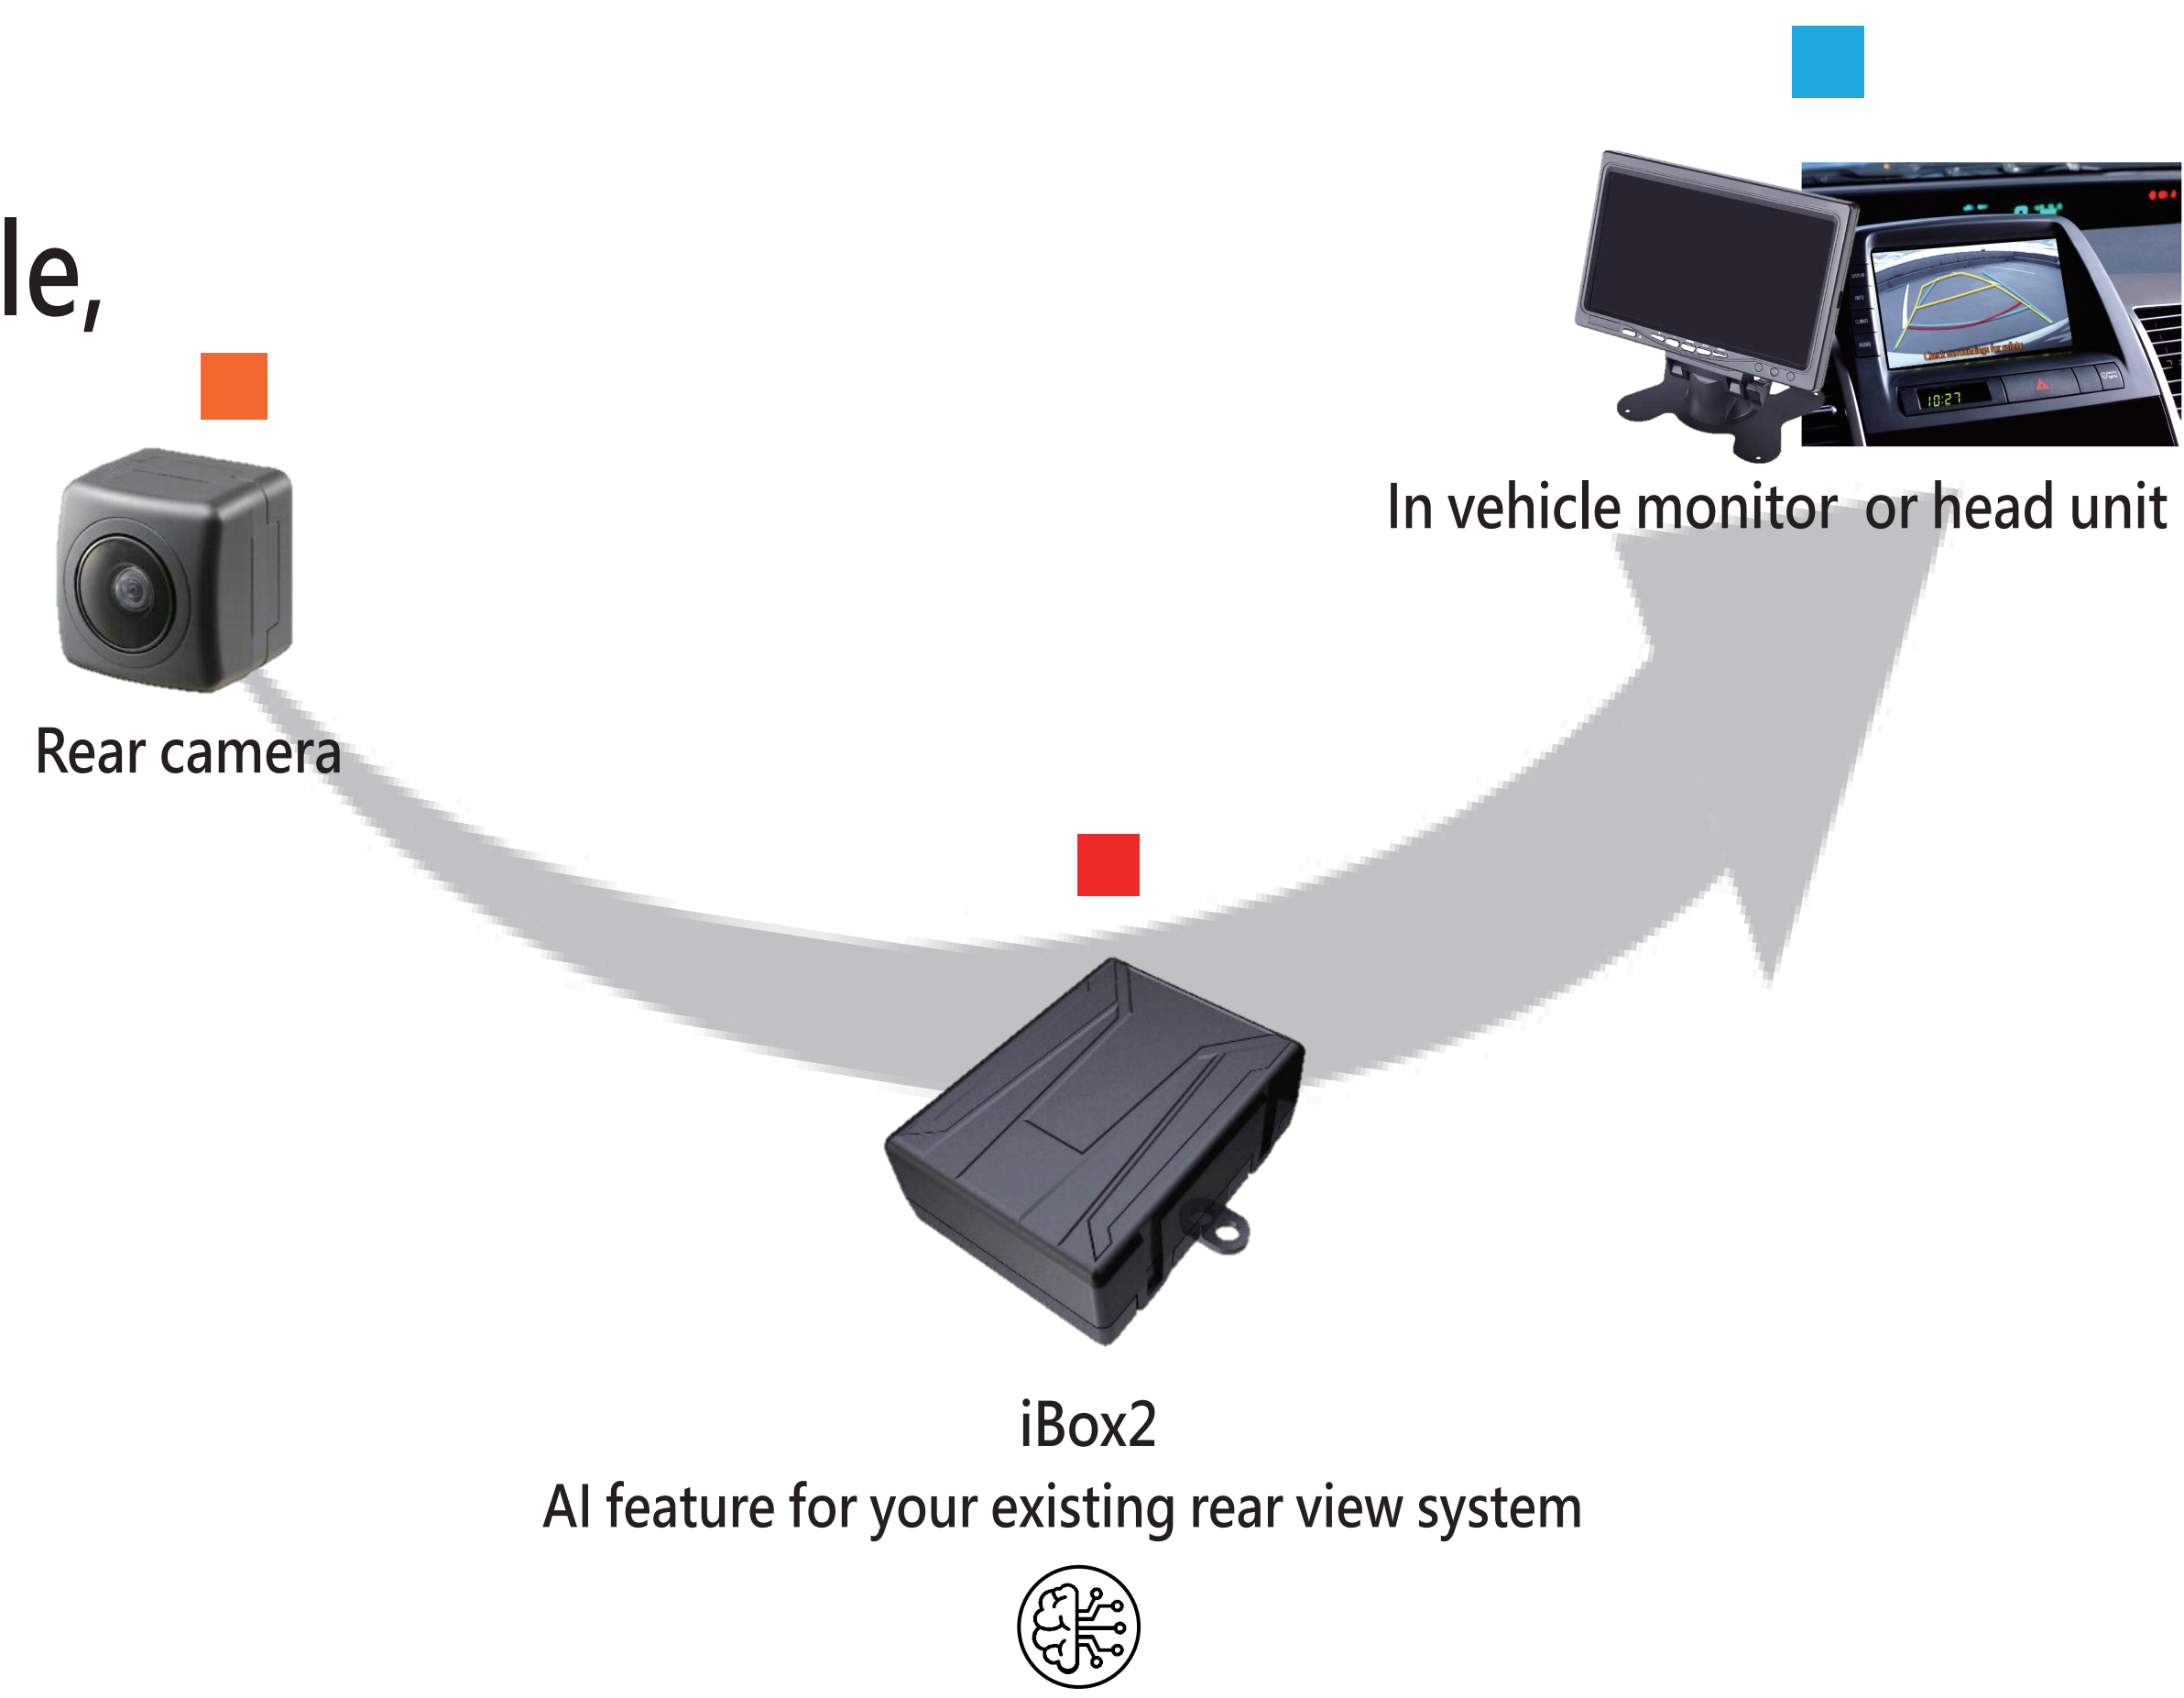

Smarter, brilliant design and easy way installation parking aid.

iBox 2

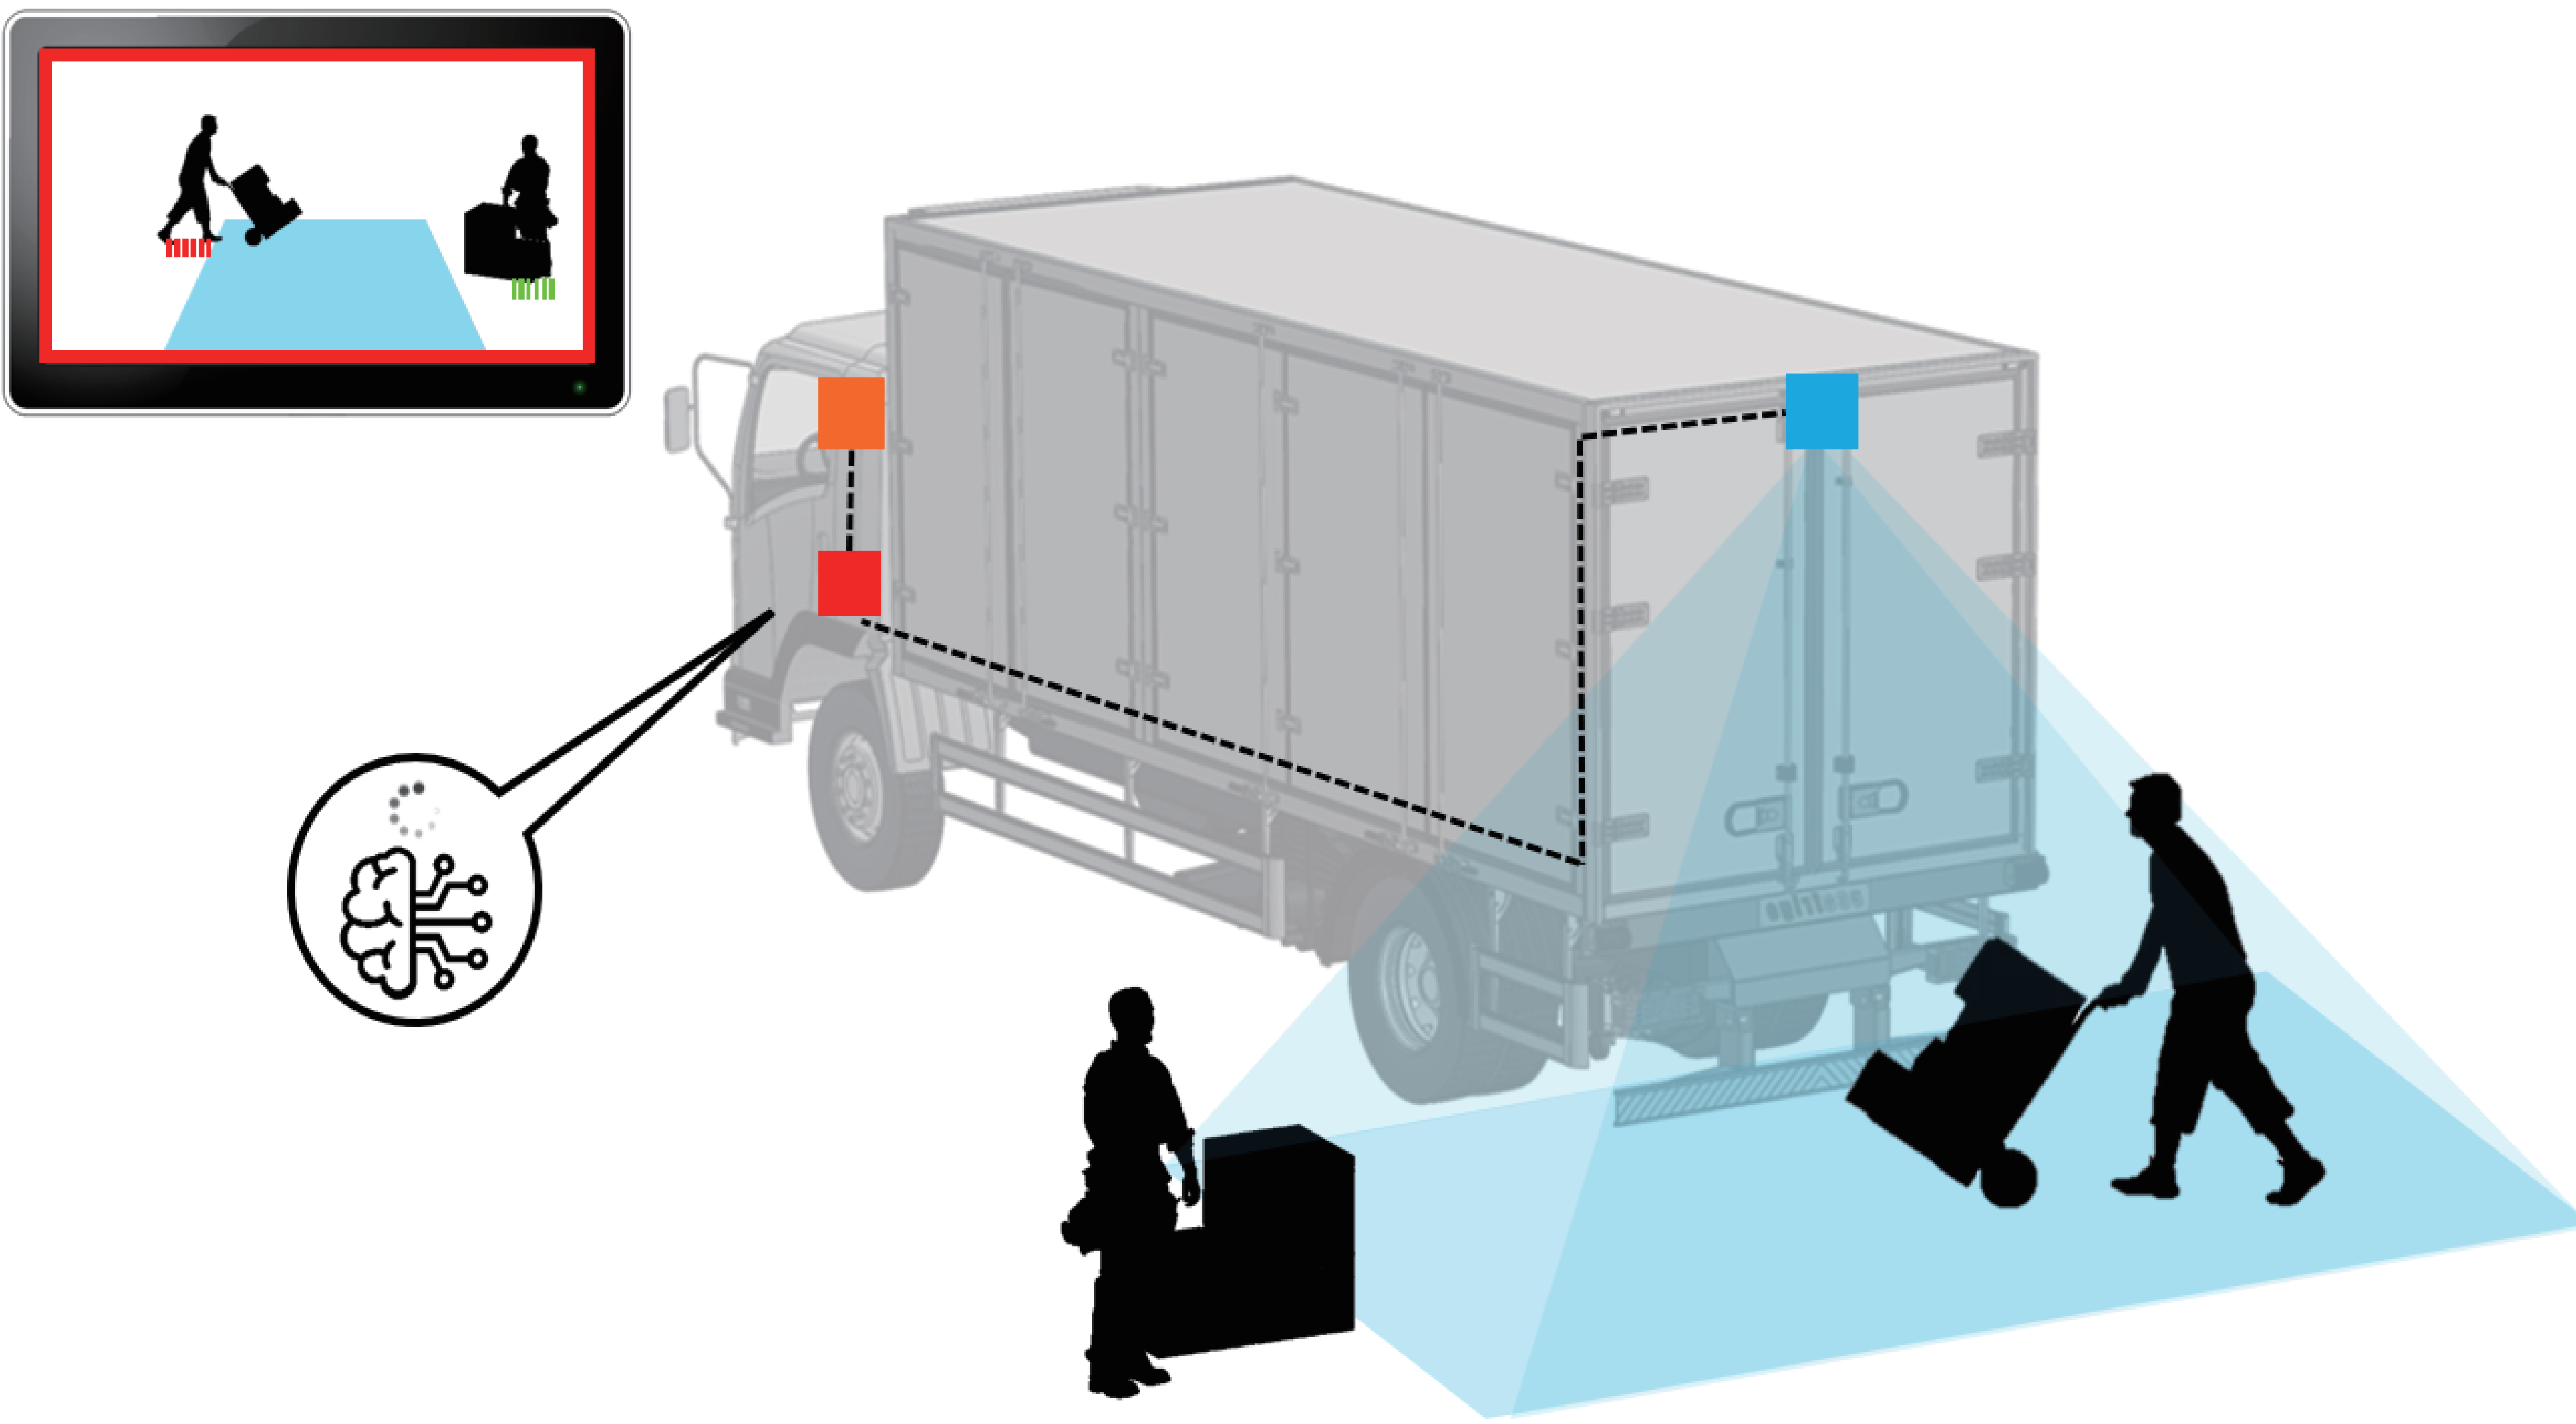

◆ Super easy & convenient design

In order to enhance the perception of the driver, mirrors are usually installed on the vehicle, as well as to help by camera-assisted related systems when driving in particular scenes.

Sometimes the environment of the vehicle is quite harsh when parking, the driver can't take other various conditions when focusing on the parking condition, or even because of the state of the event that occurred during the car around.

◆ Real time embed video AI process

VRU detection

Static pedestrians

Moving cyclist

Moving pedestrians

◆ Features

- ◆ Directly to add value on existing rear view system.
- ◆ AI VRU detection, even pedestrian is partially shown in the screen or blocked by obstacles.
- ◆ Vertical view screen switch.
- ◆ Zoom in screen switch.
- ◆ Activate alarm setup.
- ◆ Fits to high & low mount camera installation location. (9 types detection range setting).
- ◆ Automatically switch to CVBS or AHD video format according to the camera format.

AI VRU detection

VRU - Vulnerable road user, including pedestrians, cyclists and motor bikers.
