

Industrial Ethernet

Powering Next Generation
Automation Network Solutions

VOLKTEK

PRODUCT FEATURES & BENEFITS

Robust Switch Performance

- Volktek industrial switches are built with field-hardened components to withstand harsh industrial environments such as constant vibration, heavy shocks, humidity and extreme temperatures ranging from -40°C to 75°C.
- Volktek industrial switches are built with industrial grade components to ensure continuous operation of mission-critical applications even in tough and harsh industrial environments.

Industrial Grade EMC Protection

- Discover the resilience of Volktek industrial switches, fortified with top-tier safeguards such as surge protection and ESD protection against voltage surges.
- Our industrial switches are engineered to meet stringent industry standards such as EN61000-6-2 and EN61000-6-4. They boast ESD protection and dual power inputs, ensuring unparalleled reliability for your system.

Efficient Power Isolation

Volktek switches incorporate Power Isolation features, which create a protective barrier between the primary circuit and other circuits, guaranteeing device safety. This functionality shields the internal circuitry from potential harm caused by surges, ESD, or power fluctuations.

Factory Automation

Customer's Requirements

PLCs and RTUs are microcomputers that communicate with an array of objects such as factory machines, sensors, and end devices, and then route the information from those objects to computers with SCADA software. Volktek industrial network switches allow them to communicate between those devices. Then SCADA software processes, distributes, and displays the data, helping operators and

other employees analyze the data and make important decisions and to help mitigate downtime. These kind of systems require redundant links for uninterrupted connectivity and must operate in wide temperature so that no data is lost. And communication should be established between different plants in the same industry.

Proposed Solutions

- Volktek switches are designed with various ring protocols like Xpress Ring and ERPS where the network failure is recovered in time scale of milliseconds. This ensures non-stop transmission of real-time video and data.
- Volktek's industrial switches are capable of operating at critical temperature.
- Industrial grade switches provide better protection against ESD, and also certified with EMI/EMC protection.
- Every switch is rugged to excel in mission-critical applications for production and process automation and can be integrated into any large-scale distributed SCADA monitoring system.
- Features like SNMP and Hardware monitoring notify the administrator during any unwanted hardware failure or accidental power cut to ensure the reliability.

Building Automation

Key Features

- High bandwidth and transmission rate.
- Link and power redundancy.
- Compact size for building interlayer placement.
- Reliability for fire protection system networks.

Factory Automation

Key Features

- High Mean Time Between Failures (MTBF) with 5 years of warranty for repair or replacement.
- High data transmission rate.
- Anti-shock and anti-vibration design.
